

Here are the directions for setting up computers to automatically obtain an IP address. Also for connection to the wireless network (access points located in Packards and Lab).

Info that needs to be entered in wireless network settings:

- Ensure your computer's wireless networking is enabled
- select 64-bit encryption
- Network name (SSID) kioloa
- Manually assign a network key / password (WEP) 1a2a3a4a5a
- TCP/IP settings set to obtain address automatically
